Harfateh Singh Sandhu

(639) 382-7633 | sandhh36@mcmaster.ca | linkedin.com/in/harfatehsinghsandhu | Hamilton, ON

Education

McMaster University — Hamilton, ON
Bachelor of Engineering, Engineering I — *Sep 2026 – Apr 2030*

- Relevant coursework: Engineering Mathematics (matrices, linear systems), Statics, Engineering Design
- Pursuing entry into Mechanical/Civil stream; actively seeking hands-on design and manufacturing experience through student design teams

Technical Skills

CAD/Simulation: SolidWorks (part modeling, assemblies) – completed *Introduction to the 3D Editor*, Alison, Jul 2026
Manufacturing & Testing: Electrical panel assembly and wiring, quality control inspection, hands-on prototyping and troubleshooting
Tools: Microsoft Office/Excel, basic data pipelines (Python-based data cleaning), inventory/logistics systems
Core: Blueprint/spec adherence, systematic testing and validation, teamwork under deadline pressure

Projects

Heavy-Duty Mounting Bracket Assembly | *SolidWorks*

- Modeled a multi-part assembly – a base plate, two L-shaped vertical support brackets, a cross-support shaft, and standard ANSI hardware – using Boss-Extrude, Extruded Cut/Hole Wizard, and Fillet/Chamfer to build accurate part geometry
- Used Linear Pattern and Mirror to efficiently duplicate bracket profiles and hole configurations, then applied Coincident, Concentric, and Distance mates to fully constrain the assembly and seat fasteners from the Toolbox library
- Practiced translating a design intent (secure, adjustable bracket mounting) into a manufacturable part and assembly structure – the same workflow used for chassis brackets and mounts

Experience

Engineering Intern — Dera Bassi, Punjab, India
UPS International — *Jul 2026 – Aug 2026*

- Built, wired, and tested complex electrical control and power distribution panels, verifying each unit against technical specifications before sign-off
- Performed quality control inspections on completed assemblies, identifying wiring and component defects prior to deployment to reduce downstream failures
- Applied structured troubleshooting to diagnose faults in control circuits, reinforcing habits of precision and repeatability valuable to component fabrication

Sports Facility Operations Associate — Regina, SK
Tuxedo Courts — *Oct 2024 – Jul 2026*

- Supported day-to-day operations of a multi-sport facility with four full-size courts, managing rapid transitions between events under tight time constraints
- Diagnosed and resolved on-the-spot equipment and scheduling issues, building a practical, hands-on approach to problem-solving in a fast-paced, shift-based setting

Student Researcher — Chandigarh, India
CRRID — *Jul 2025 – Aug 2025*

- Engineered data entry and cleaning pipelines, systematically identifying inconsistencies across large-scale inputs – applying the same careful, repeatable process valuable to test and measurement record-keeping

Community Operations & Logistics Volunteer — Chandigarh, India
Together For Others — *Jul 2025 – Aug 2025*

- Managed logistics and operational coordination for regional outreach campaigns, overseeing resource distribution and supply chains within tight timelines and limited resources
